abuzz

LOCATION:

Australia

MARKET SECTOR:

TECHNOLOGY:

ZyTouch™

WHAT WE DID:

Zytronic's ZYTOUCH® touch sensors were selected by Abuzz Technologies for use in its globally deployed, award-winning interactive wayfinding kiosk product, the Edge.

Using Zytronic's unique PCT™ technology, the Edge satisfies the high ergonomic and safety requirements of installations which are situated in busy public areas.

The stylish kiosk is designed for use in airports, shopping centres, corporate buildings. Zytronic's PCT™ utilises state-of-the-art capacitance technology meaning the touchscreen can be used with gloved and un-gloved fingers, and provides unrivalled durability.

Manufactured with 8mm toughened glass, which not only exceeds the safety requirements for public use, but also makes the unit splash-proof for robust operation.

WHAT THEY SAID:

We assessed several possible solutions, Zytronic was the only manufacturer with the technology to allow us to optimise the functionality and aesthetics of the Edge kiosk without compromising the integrity of our design concept. PCT™ sensing technology works reliably, even through the thick layer of toughened protective glass, providing the performance we need. In addition, the product was simple to integrate, thanks to first-class technical support from Zytronic's local representative, JEA Technologies Pty Ltd...
