France

MARKET SECTOR:

TECHNOLOGY:

ZyBrid™ Multi Touch

WHAT WE DID:

Interactive Touch Tables with Multi-Touch Projected Capacitive Technology (PCT™).

French interactive furniture producer HUMElab has selected Zytronic's ultra-durable p-cap sensors with projected capacitive technology (PCT™) for a series of multi-touch table products, targeted at use in home, restaurant and hospitality settings.

HUMElab required a solution that could deliver exceptional multi-touch responses and withstand stresses of high usage public areas, whilst supporting a sleek, aesthetically pleasing exterior to fit comfortably into high-end luxury environments.

WHAT THEY SAID:

"Zytronic's touch sensors were chosen because of the fluidity of their touch response and the 40 simultaneous touch points they can support. The sensors also showed themselves to have other advantageous qualities in terms of maintenance as there is no need to calibrate the system anything like as often as with the previous solution we used."

Armand Menargues
International Sales Director,
HUMElab
