

# ZYTRONIC

The world at your finger tips

#### CLIENT:

# AENsys

#### LOCATION:

## Hungary

#### MARKET SECTOR:

#### TECHNOLOGY:

# ZyPoS™

#### WHAT WE DID:

Zytronic, through its Eastern European distribution partner Elatec, has landed another major design win for its Projective

Capacitive Technology (PCT™). Hungarian systems developer AENSys has chosen PCT as the basis for its latest product - a data acquisition and workflow monitoring tool, which it is now rolling out across the continent.

AENSys' Gremon is a management system designed for use in commercial greenhouses. The graphical user interfaces (GUIs) for each control module in the system utilize a 7-inch version of Zytronic's highly popular ZYPOS® touch sensor, as it exhibited all the key attributes required. The rugged touch sensor specified for this application needed to be able to respond to touches from users wearing latex gloves and function when dirty and it had to support a smooth-fronted design that would be easy to wipe down..

#### WHAT THEY SAID:

We investigated a number of different touch sensing solutions from leading vendors, but Zytronic's PCT stood out as the best option, due its combination of strong touch performance and rugged construction, furthermore, we were impressed by the high level technical support the company offered, as this proved to be invaluable in getting the project completed on time.

Attila Bilicki,  
Managing Director, AENSys
