

ZYTRONIC

The world at your fingertips

CLIENT:

premier source for intelligent lecterns

LOCATION:

Netherlands

MARKET SECTOR:

TECHNOLOGY:

ZyBrid™

WHAT WE DID:

Zytronic's durable and customisable touch sensors, are being applied to an ever broader spectrum of industry sectors. Netherlands based Intelligent Lectern Systems (ILS), a leading developer of audio-visual presentation tools, incorporated a customised PCT-based sensor into the next generation of ILS products.

Designed for the auditoriums of academic establishments or the boardrooms of large corporations around the world, the ILS 22G e-podium is an attractive conferencing/presentation system consisting of a sleek, stylish all-in-one console of aluminium construction. It has a 22 inch touch enabled display with a surrounding extended touch zone incorporating a number of source controls, short-cut keys, a full QWERTY keyboard and an annotation pad. These combine to create a stunning 31 inch multifunctional touch area. The e-podium's advanced human computer interface (HCI) is designed to be intuitive to use, so that minimal training is required.

WHAT THEY SAID:

Zytronic was chosen to assist in this upgrade because of the performance benchmarks its touch technology was able to offer. The other suppliers that we considered were simply not able to meet the criteria we had set for this project, either in terms of the customisation, resolution, dynamic reaction or the overall robustness required..

Henk de Groot
Managing Director of ILS
